

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are utilized on lift masts in order to help them work in challenging environmental surroundings. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences such as heat, dust, cold, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements should be particularly strong and have a certain high load carrying capacity.

Carriage rollers have been developed as the answer for working in different environmental conditions. These bearings are the answer where the guidance arrangements of the lift masts should be cost-effective and maintain operational security while having the capability to deal with a particularly high load carrying capacity.
